

MUHAMMAD RAZA MEER HAYAT

+92 3190361314 | razameerhayat@gmail.com | Github | LinkedIn | Portfolio

PROFILE

Computer Science student at Air University Kamra building efficient, scalable applications with a focus on object-oriented design and clean, maintainable code. Proficient across the full stack — from desktop GUI applications in C++/Qt to web systems with PHP/MySQL and Java OOP backends. Strong problem-solving instincts sharpened through hands-on projects spanning transport systems, e-commerce, and process automation. Actively expanding into mobile development with Flutter and modern frontend frameworks.

EDUCATION

Air University Kamra <i>Bachelor of Science in Computer Science</i>	2024 – 2028 GPA: 3.3 / 4.0
Punjab College Kamra <i>FSc Pre-Engineering</i>	2022 – 2024

TECHNICAL SKILLS

- Languages:** Python, Java, C++, C#, PHP, JavaScript, SQL, HTML/CSS
Frontend: ReactJS, Responsive Design, UI Animations
Backend: Node.js, C# (.NET)
Mobile: Flutter (Android & iOS)
Databases: MySQL, Firebase, SQL Workbench
GUI / Desktop: Qt Framework (QT IDE, QT Classes, Event Handling)
Concepts: OOP, Data Structures & Algorithms, Software Design, REST APIs, Process Automation
Tools: Eclipse, Visual Studio, DevC++, GitHub, VS Code, Xampp
Spoken Languages: English, Urdu

PROJECTS

- Mini Uber System** | C++, QT Framework, DSA
- Designed and built a fully functional ride-booking desktop application featuring driver allocation, real-time UI interaction, and trip management — demonstrating applied DSA concepts (queues, graphs) for routing and assignment logic.
 - Implemented event-driven GUI using QT Classes, resulting in a responsive and intuitive user experience across booking, driver, and trip management flows.
- Online Grocery Store** | HTML/CSS, JavaScript, PHP, MySQL, Xampp
- Developed a full-featured e-commerce web application with product browsing, cart management, user authentication, and order placement — handling both frontend responsiveness and backend database operations end-to-end.
 - Applied UI animation techniques and responsive design principles to improve digital conversion and user retention.
- Automated Machine System** | Java OOP, MySQL, SQLConnector
- Built a process automation system in Java leveraging OOP principles (encapsulation, inheritance, polymorphism) to model machine workflows, enabling efficient and user-friendly task execution.
 - Integrated MySQL via SQLConnector for persistent state management, supporting reliable data operations across automated processes.

CERTIFICATIONS

- Professional Freelancing Training Program** May 2025 – July 2025
- Smart Code Arena** – Certificate June 2025
